

As a UK based radio amateur operator, I would like to express my strong opposition to any proposal to implement BPL in the USA. This new form of pollution of the airways would rapidly be adopted around the world (where the USA leads...) and would mean the end of the HF spectrum as a resource for emergencies, the military, broadcasting, amateur radio and for its many other users including radio astronomers and other researchers. With many and better alternatives for broadband being available, I hope that good sense will prevail and the widespread interference that would follow if BPL were adopted will be prevented.

David, UK
